Installation du SNMP sur la messagerie IRedMail sous Ubuntu	18
Installation du SNMP sur le client Ubuntu	19
Résultat final	20

### Installation de Observium

#### Dans /etc/netplan/00..:

```
GNU nano 4.8 /etc/netplan/00-installer-config.yaml
# This is the network config written by 'subiquity'
network:
   ethernets:
   ens160:
   addresses: [10.1.1.150/24]
   gateway4: 10.1.1.254
   nameservers:
   addresses: [1.1.1.1, 1.0.0.1]
   dhcp4: false
   dhcp6: false
   version: 2
```

netplan apply puis reboot

Ensuite MàJ → apt update && apt full-upgrade –y

Après la configuration de Ubuntu Server 20.04

root@observium—ent1:/home/observium# ./observium\_installscript.sh

```
Welcome to Observium automatic installscript v0.2

Please choose which version of Observium you would like to install

1. Observium Community Edition
2. Observium Pro Edition stable (requires account at https://www.observium.org/subs/)
3. Observium Pro Edition rolling (requires account at https://www.observium.org/subs/)
4. Install the UNIX-Agent
5. Install the SNMPD (snmpd-config will be overwritten)
(1–5):1you choose 1

dpkg-query: no packages found matching mysql-server
dpkg-query: no packages found matching mariadb-server
[*] No MySQL server detected in this server, installing MySQL...
Choose a MySQL root password
```

⇒ Ensuite, choisir le mot de passe MySQL pour le compte « root »

```
[*] Creating log and rrd-directories...
[*] Apache version is 2.4, creating config...
Enabling module rewrite.
To activate the new configuration, you need to run:
   systemctl restart apache2
AH00558: apache2: Could not reliably determine the server's fully qualified domain name, using 127.0
.1.1 Set the 'ServerName' directive globally to suppress this message
Create first time Observium admin user
Username:entladmin
```

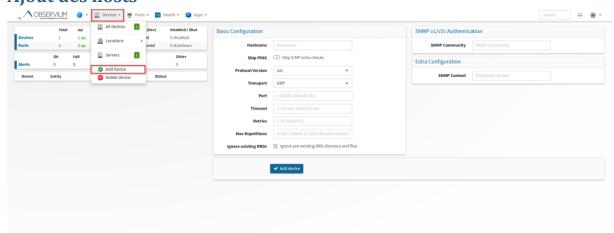

```
User entladmin added successfully.

[*] Creating Observium cronjob...

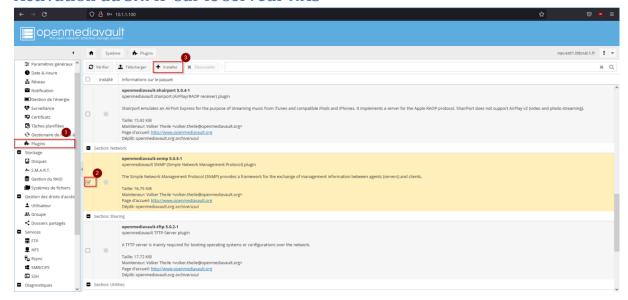

Would you like to install/configure SNMP daemon and monitor this host with Observium? (your snmpd-config will be overwritten!) (Y/n): _
```

 $\Rightarrow$  Y

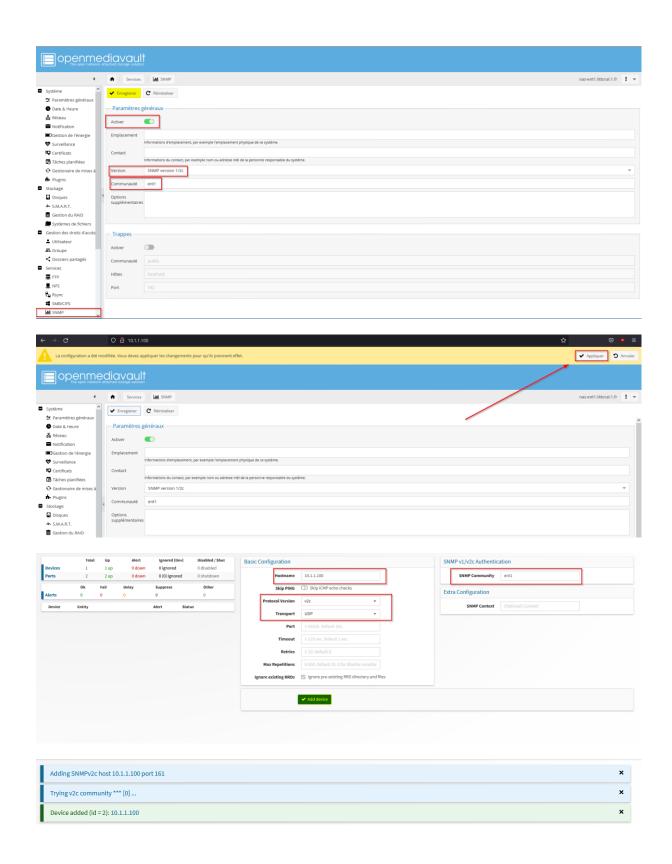

## **Ajout des hosts**

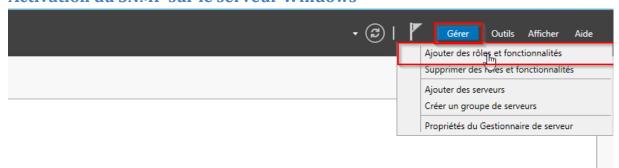

## **Activation du SNMP sur le serveur NAS**

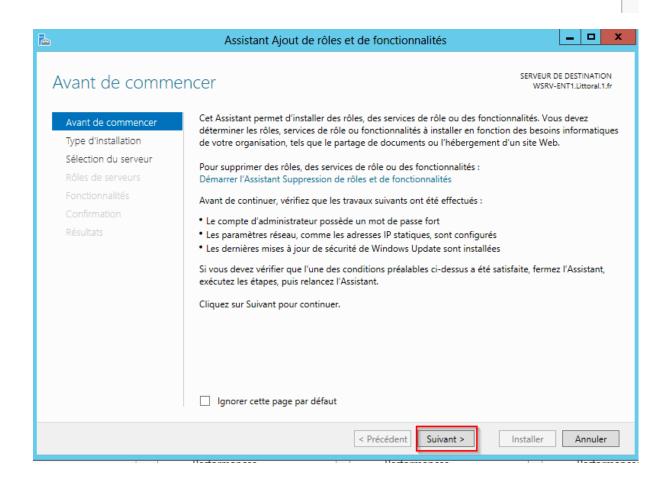

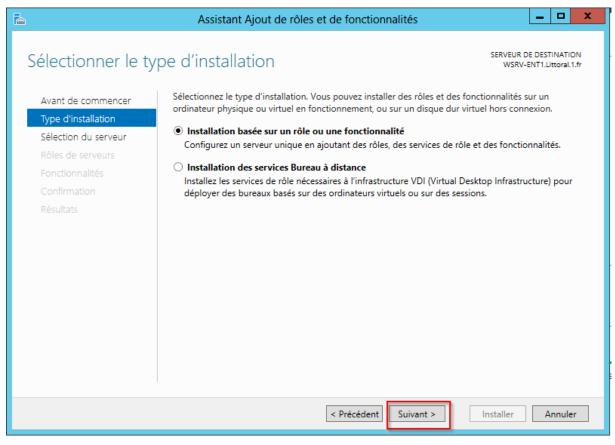

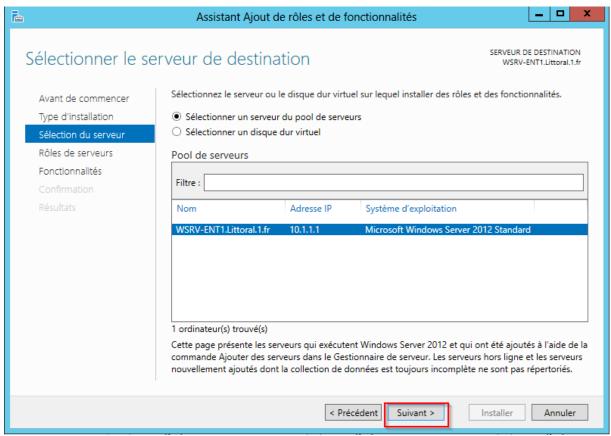

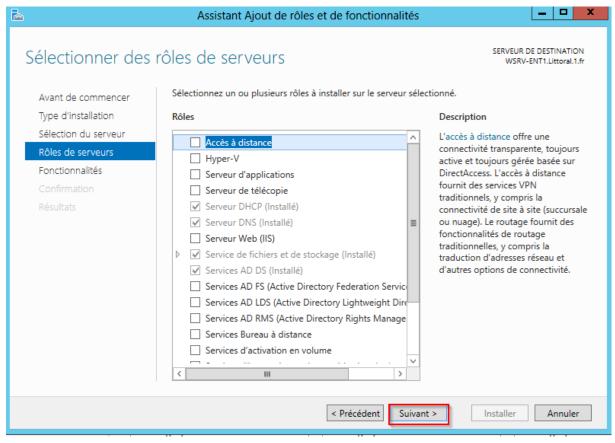

### **Activation du SNMP sur le serveur Windows**

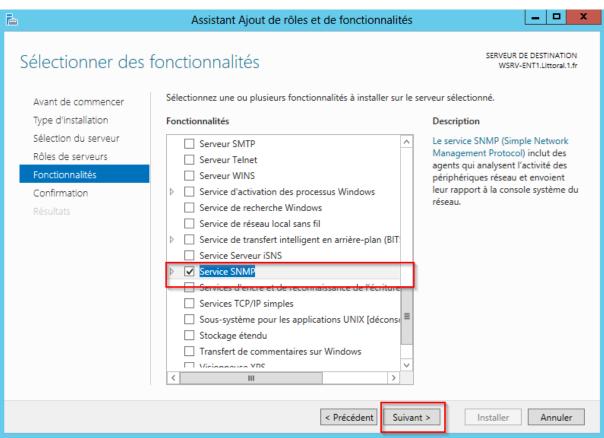

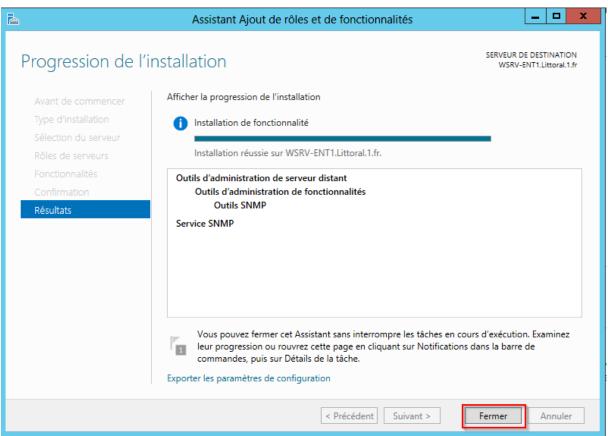

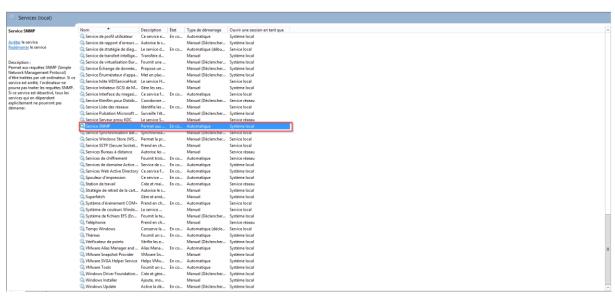

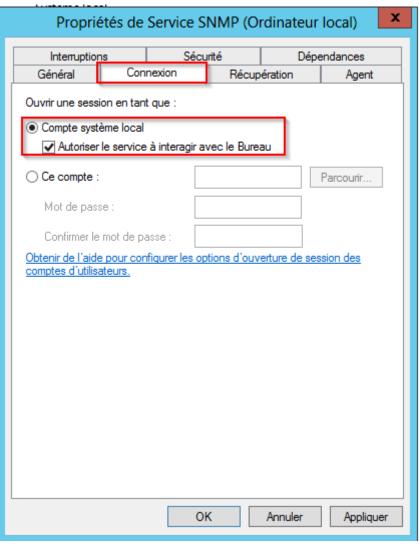

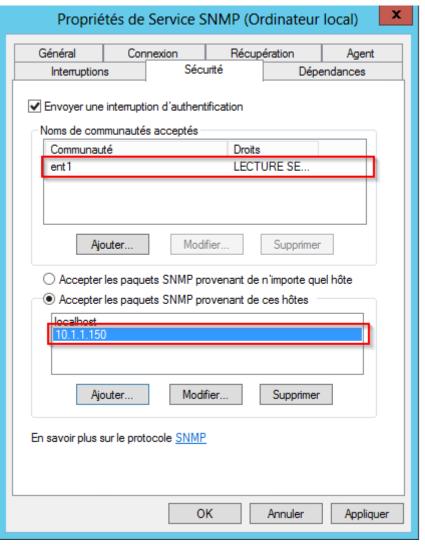

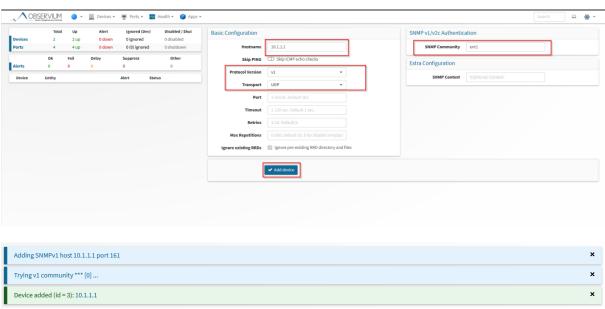

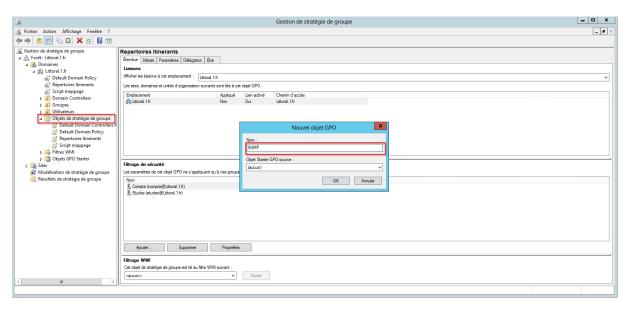

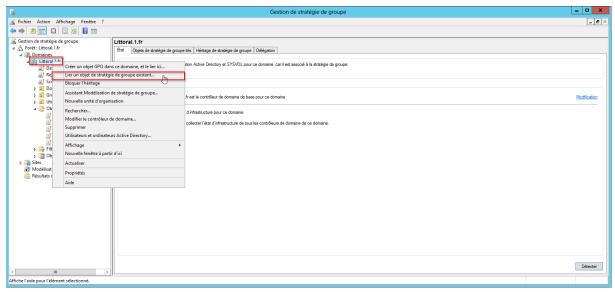

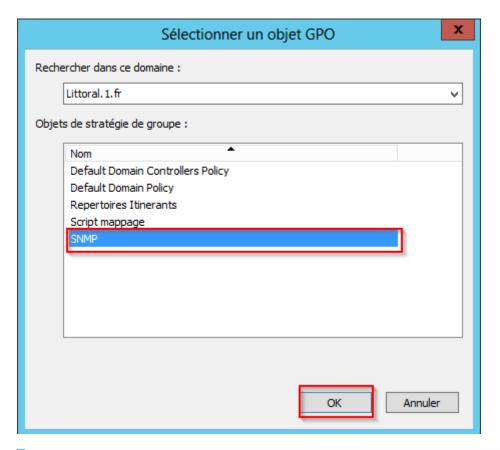

## **Activation du SNMP sur les clients Windows 7**

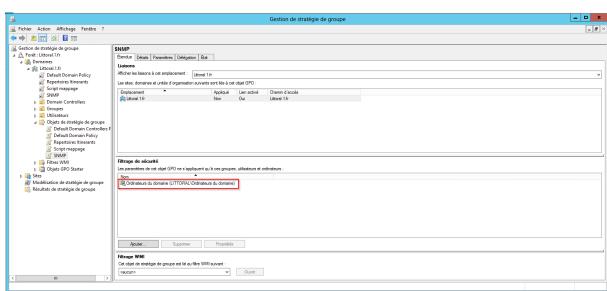

# Déploiement par GPO depuis le serveur Windows

Dans la gestion des stratégies de groupe -

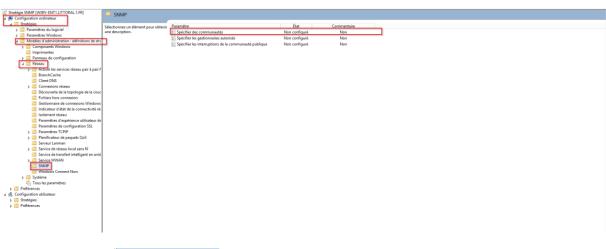

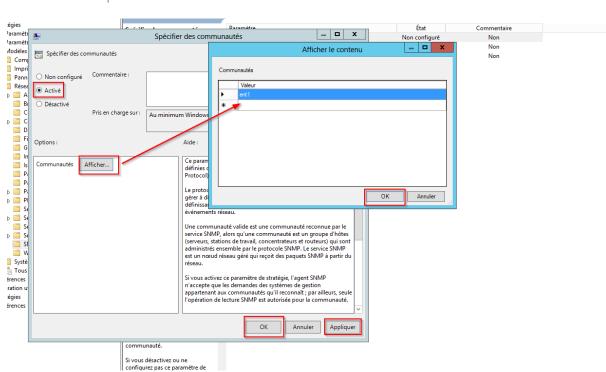

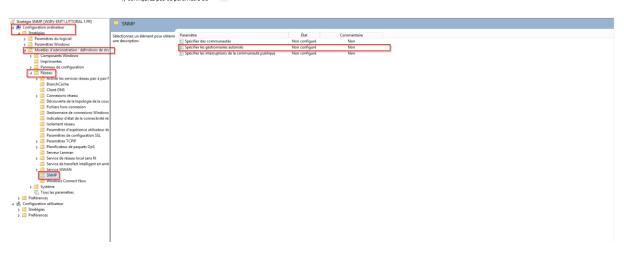

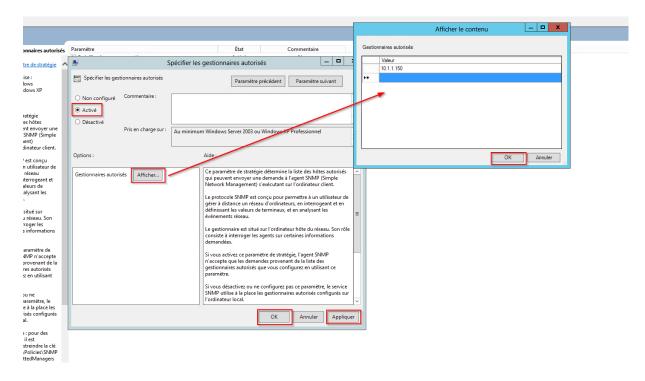

Modification de la GPO →

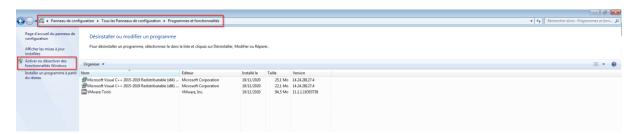

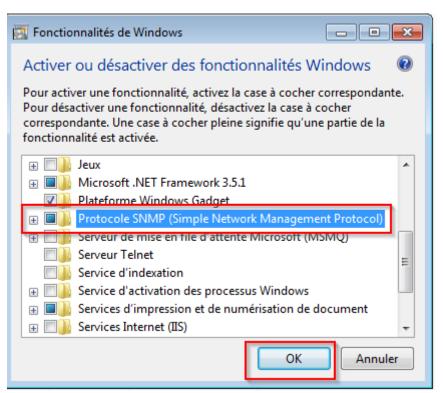

#### Depuis le client Windows:

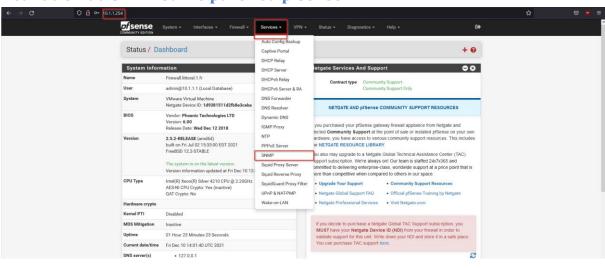

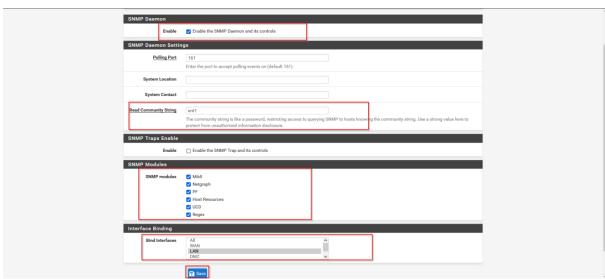

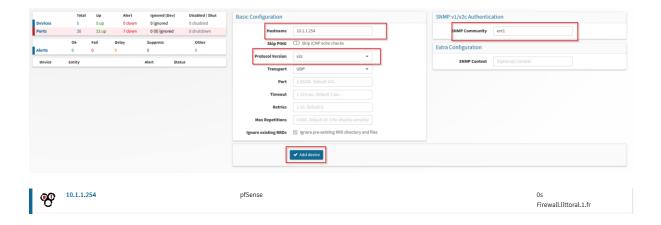

## ⇒ Cocher la case « Skip ICMP echo checks »
